

# Supplier Management

## Manage and Rate your Suppliers Through a Combined Process of Tracking and Analysis with This Easy-to-Use Program that Works the Way You Do

Our **Supplier Rating Manager 1.5** software is a simple, yet effective tool for measuring the relative performance of your suppliers.

### Why You Need an Effective Supplier Management System:

#### Supplier Partnerships

Effective supplier relationships include the creation of a long-term process that will ensure that they will be there when you need them and that you will want their support when they call.

#### Win/Win Supply Chain

There are needs to be a reasonable expectation on the part of your suppliers that they will be able to prosper through their work-effort with your organization. They need to be as free as you are to succeed through your quality management efforts.

The Supplier Rating Manager Program provides the basic tools for storing information concerning subcontractor quality performance. This software is designed to give companies the ability to organize, document and generate reports on the results of subcontractor evaluation in accordance with their own established procedures. The flexibility and ease of use of the software provide a straight forward way of evaluating subcontractor and supplier performance.

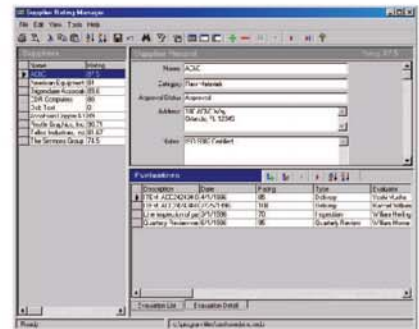

### Benefits of Supplier Rating Manager

#### Evaluate Supplier Performance

Document key information on your suppliers such as approval status, dates, ratings, and evaluator comments. This information can be used when performing on-site inspections and to identify your list of "approved suppliers".

#### Document Evaluations

Each time you perform a source inspection, supplier audit, or receive a shipment, you have the opportunity to rate the supplier's performance based on a number of self-defined criteria. Supplier Rating Manager tracks the ratings for each of these events for comparison and trend analysis.
